Abstract

It was shown by the author [International Journal of Theoretical Physics 36 (1997), 1099-1131] that what is called the general Jacobi identity, obtaining in microcubes, underlies the Jacobi identity of vector fields. It is well known in the theory of Lie algebras that a plethora of higher-dimensional generalizations of the Jacobi identity hold, though they are usually established not as a derivation on the nose from the axioms of Lie algebras but by making an appeal to the so-called Poincaré-Birkhoff-Witt theorem and the like. The general Jacobi identity was rediscovered by Kirill Mackenzie in the second decade of this century [Geometric Methods in Physics, 357-366, Birkhäuser/Springer 2013]. The principal objective in this paper is to investigate a four-dimensional generalization of the general Jacobi identity in detail. In a subsequent paper we will propose a uniform method for establishing a bevy of higher-dimensional generalizations of the general Jacobi identity under a single umbrella.

1 Introduction

It is known in synthetic differential geometry (cf. [2] and [4]) that vector fields on a microlinear space M forms a Lie algebra, for which the following antisymmetry holds:

$$[X_1, X_2] + [X_2, X_1] = 0 \tag{1}$$

It was shown in [3] that a bit deeper theorem in the following underlies the above identity.

Theorem 1 *Let M be a microlinear space. Given microsquares $\gamma_{12}, \gamma_{21} : D^2 \to M$ with $\gamma_{12} \mid D(2) = \gamma_{21} \mid D(2)$, we have*

$$\left(\gamma_{12} \mathbin{\dot{-}} \gamma_{21}\right) + \left(\gamma_{21} \mathbin{\dot{-}} \gamma_{12}\right) = 0 \tag{2}$$

Now we consider the famous Jacobi identity.

$$[X_1, [X_2, X_3]] + [X_2, [X_3, X_1]] + [X_3, [X_1, X_2]] = 0 \tag{3}$$

It claims that the sum of $[X_1, [X_2, X_3]]$'s with the three cyclic permutations of $\{1, 2, 3\}$ applied vanishes. We note in passing that the three cyclic permutations of $\{1, 2, 3\}$ are no other than the three even permutations of $\{1, 2, 3\}$. It has been demonstrated in [6], [7], [8] and [10] that the following deeper theorem underlies the above identity.

Theorem 2 *(General Jacobi Identity) Let M be a microlinear space. Given microcubes $\gamma_{123}, \gamma_{132}, \gamma_{213}, \gamma_{231}, \gamma_{312}, \gamma_{321} : D^3 \to M$ with*

$$\begin{aligned}
&\gamma_{123} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_2 d_3 = 0\big\} = \gamma_{132} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_2 d_3 = 0\big\} \\
&\gamma_{231} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_2 d_3 = 0\big\} = \gamma_{321} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_2 d_3 = 0\big\} \\
&\gamma_{231} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_3 = 0\big\} = \gamma_{213} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_3 = 0\big\} \\
&\gamma_{312} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_3 = 0\big\} = \gamma_{132} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_3 = 0\big\} \\
&\gamma_{312} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_2 = 0\big\} = \gamma_{321} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_2 = 0\big\} \\
&\gamma_{123} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_2 = 0\big\} = \gamma_{213} \mid \big\{(d_1, d_2, d_3) \in D^3 \mid d_1 d_2 = 0\big\}
\end{aligned}$$

we have

$$\begin{aligned}
&\left(\left(\gamma_{123} \underset{1}{\cdot} \gamma_{132}\right) \dot{-} \left(\gamma_{231} \underset{1}{\cdot} \gamma_{321}\right)\right) + \\
&\left(\left(\gamma_{231} \underset{2}{\cdot} \gamma_{213}\right) \dot{-} \left(\gamma_{312} \underset{2}{\cdot} \gamma_{132}\right)\right) + \\
&\left(\left(\gamma_{312} \underset{3}{\cdot} \gamma_{321}\right) \dot{-} \left(\gamma_{123} \underset{3}{\cdot} \gamma_{213}\right)\right) \\
&= 0
\end{aligned} \tag{4}$$

The general Jacobi identity was rediscovered by Kirill Mackenzie [5] in a somewhat different context. We add that the general Jacobi identity plays a fundamental role in a combinatorial or geometric proof of Jacobi-like identities in so-called Frölicher-Nijenhuis calculus (cf. [9]).

Now we consider the following four-dimensional analogue of the Jacobi identity.

$$\begin{aligned}
&[X_1, [X_2, [X_3, X_4]]] + [X_1, [X_3, [X_4, X_2]]] + [X_1, [X_4, [X_2, X_3]]] + \\
&[X_2, [X_1, [X_4, X_3]]] + [X_2, [X_3, [X_1, X_4]]] + [X_2, [X_4, [X_3, X_1]]] + \\
&[X_3, [X_1, [X_2, X_4]]] + [X_3, [X_2, [X_4, X_1]]] + [X_3, [X_4, [X_1, X_2]]] + \\
&[X_4, [X_1, [X_3, X_2]]] + [X_4, [X_2, [X_1, X_3]]] + [X_4, [X_3, [X_2, X_1]]] \\
&= 0
\end{aligned} \tag{5}$$

It claims that the sum of $[X_1, [X_2, [X_3, X_4]]]$'s with the twelve even permutations of $\{1, 2, 3, 4\}$ applied vanishes.

The principal objective in this paper is to establish a four-dimensional version of the general Jacobi identity underpinning the above identity (5). In a subsequent paper we will discuss a slew of higher-dimensional general Jacobi identities underlying the higher-dimensional Jacobi identities discussed in [1] and [12] (the former called them *generalized Jacobi identities*) from a coherent standpoint. For a good introduction to generalized Jacobi identities, the reader is referred to Chapter 8 of [11]. We know well that various higher-dimensional Jacobi identities are logical consequences of the three-dimensional Jacobi identity, but we guess that higher-dimensional general Jacobi identities are by no means logical consequences of the three-dimensional general Jacobi identity. We assume the reader to be familiar with [4] up to Chapter 3.

2 Strong Differences

First we introduce the notion of a simplicial small object after [6], though in a somewhat generalized form.

Notation 3 *(Simplicial small objects) Let n be a natural number. Given a subset $\mathfrak{p}$ of*

$$\{(i,j) \in \mathbb{N} \times \mathbb{N} \mid 1 \leq i \leq n, 1 \leq j \leq n, i \neq j\}$$

and a subset ξ of

$$\{i \in \mathbb{N} \mid 1 \leq i \leq n\}$$

$D^n\{\mathfrak{p},\xi\}$ denotes the set

$$\{(d_1,...,d_n) : D^n \mid d_i d_j = 0 \text{ for any } (i,j) \in \mathfrak{p},\ d_i = 0 \text{ for any } i \in \xi\}$$

which is surely a small object. By way of example, we have

$$D(2) = D^2\{(1,2)\}$$
$$D(3) = D^3\{(1,2),(1,3),(2,3)\}$$

and $D^3\{1,3\}$ can be identified with D via the canonical isomorphism

$$d \in D \mapsto (0,d,0) \in D^3\{1,3\}$$

The notion of strong difference in synthetic differential geometry is based upon the following lemma.

Lemma 4 *(cf. the first Lemma in §3.4 of [4]) The diagram*

$$\begin{array}{ccccc} & & D^3\{(1,3),(2,3)\} & & \\ & \nearrow & & \nwarrow & \\ D^2 & & & & D^2 \\ & \nwarrow & & \nearrow & \\ & & D^2\{(1,2)\} & & \end{array} \tag{6}$$

with the lower two arrows being the canonical injections and the upper two arrows being

$$j_1^2 : (d_1, d_2) \in D^2 \mapsto (d_1, d_2, d_1 d_2) \in D^3 \{(1,3), (2,3)\}$$
$$j_2^2 : (d_1, d_2) \in D^2 \mapsto (d_1, d_2, 0) \in D^3 \{(1,3), (2,3)\}$$

from left to right is a quasi-colimit diagram.

Corollary 5 *Let M be a microlinear space with two microsquares $\gamma_1, \gamma_2 : D^2 \to M$ abiding by*

$$\gamma_1 \mid D^2 \{(1,2)\} = \gamma_2 \mid D^2 \{(1,2)\}$$

Then there exists a unique mapping

$$\mathfrak{n}^2_{(\gamma_1,\gamma_2)} : D^3 \{(1,3), (2,3)\} \to M$$

such that $\mathfrak{n}^2_{(\gamma_1,\gamma_2)} \circ j_1^2 = \gamma_1$ and $\mathfrak{n}^2_{(\gamma_1,\gamma_2)} \circ j_2^2 = \gamma_2$.

Notation 6 *In the above notation in Corollary 5 we write $\gamma_1 \dot{-} \gamma_2$ for the mapping*

$$d \in D \mapsto \mathfrak{n}^2_{(\gamma_1,\gamma_2)} (0, 0, d)$$

The notion of strong difference can easily be relativized.

Lemma 7 *Let n be a natural number. The diagram*

$$\begin{array}{ccccc} & & D^{n+3}\{(n+1,n+3),(n+2,n+3)\} & & \\ & \nearrow & & \nwarrow & \\ D^{n+2} & & & & D^{n+2} \\ & \nwarrow & & \nearrow & \\ & & D^{n+2}\{(n+1,n+2)\} & & \end{array} \qquad (7)$$

with the lower two arrows being the canonical injections and the upper two arrows being

$$j_1^{n+2} : (d_1, ..., d_n, d_{n+1}, d_{n+2}) \in D^{n+2} \mapsto (d_1, ..., d_n, d_{n+1}, d_{n+2}, d_{n+1} d_{n+2}) \in D^{n+3} \{(n+1, n+3), (n+2, n+3$$
$$j_2^{n+2} : (d_1, ..., d_n, d_{n+1}, d_{n+2}) \in D^{n+2} \mapsto (d_1, ..., d_n, d_{n+1}, d_{n+2}, 0) \in D^{n+3} \{(n+1, n+3), (n+2, n+3)\}$$

from left to right is a quasi-colimit diagram.

Corollary 8 *Let n be a natural number. Let M be a microlinear space with two mappings $\gamma_1, \gamma_2 : D^{n+2} \to M$ abiding by*

$$\gamma_1 \mid D^{n+2} \{(n+1, n+2)\} = \gamma_2 \mid D^{n+2} \{(n+1, n+2)\}$$

Then there exists a unique mapping

$$\mathfrak{n}^{n+2}_{(\gamma_1,\gamma_2)} : D^{n+3} \{(n+1, n+3), (n+2, n+3)\} \to M$$

such that $\mathfrak{n}^{n+2}_{(\gamma_1,\gamma_2)} \circ j_1^{n+2} = \gamma_1$ and $\mathfrak{n}^{n+2}_{(\gamma_1,\gamma_2)} \circ j_2^3 = \gamma_2$.

Notation 9 *Let n be a natural number. Let M be a microlinear space. Given $\gamma : D^n \to M$ and a permutation σ of $\{1, ..., n\}$, we write γ^σ for the mapping*

$$(d_1, ..., d_n) \in D^n \mapsto \gamma\left(d_{\sigma^{-1}(1)}, ..., d_{\sigma^{-1}(n)}\right) \in M$$

Notation 10 *Let n be a natural number. Let M be a microlinear space.*

1. *Given $\gamma_1, \gamma_2 : D^{n+2} \to M$ with*

$$\gamma_1 \mid D^{n+2}\{(n+1, n+2)\} = \gamma_2 \mid D^{n+2}\{(n+1, n+2)\}$$

we write $\gamma_1 \underset{1...n}{\dot{-}} \gamma_2$ for the mapping

$$(d_1, ..., d_n, d_{n+1}) \in D^{n+1} \mapsto \mathfrak{n}^{n+2}_{(\gamma_1, \gamma_2)}(d_1, ..., d_n, 0, 0, d_{n+1}) \in M$$

2. *Given a permutation σ of $\{1, ..., n, n+1, n+2\}$ and $\gamma_1, \gamma_2 : D^{n+2} \to M$ with*

$$\gamma_1 \mid D^{n+2}\{(\sigma(n+1), \sigma(n+2))\} = \gamma_2 \mid D^{n+2}\{(\sigma(n+1), \sigma(n+2))\}$$

we write $\gamma_1 \underset{\sigma(1)...\sigma(n)}{\dot{-}} \gamma_2$ for $(\gamma_1)^\sigma \underset{1...n}{\dot{-}} (\gamma_2)^\sigma$.

The following result is well known.

Lemma 11 *(cf. Proposition 6 in §2.2 of [4]) The diagram*

$$\begin{array}{ccccc} & & D^2\{(1,2)\} & & \\ & \nearrow & & \nwarrow & \\ D^2\{1\} & & & & D^2\{2\} \\ & \nwarrow & & \nearrow & \\ & & 1 & & \end{array} \tag{8}$$

with the four arrows being the canonical injections is a quasi-colimit diagram.

Corollary 12 *Let M be a microlinear space. Given $\gamma_1, \gamma_2 : D^2 \to M$,*

$$\gamma_1 \mid D^2\{(1,2)\} = \gamma_2 \mid D^2\{(1,2)\}$$

obtains iff both

$$\gamma_1 \mid D^2\{1\} = \gamma_2 \mid D^2\{1\}$$

and

$$\gamma_1 \mid D^2\{2\} = \gamma_2 \mid D^2\{2\}$$

obtain.

It can readily be relativized and generalized.

Lemma 13 *The diagram*

$$\begin{array}{ccccc} & & D^{n+m_1+m_2}\left\{\begin{array}{c}(n+i,n+m_1+j)\mid\\ 1\leq i\leq m_1, 1\leq j\leq m_2\end{array}\right\} & & \\ & \nearrow & & \nwarrow & \\ D^{n+m_1+m_2}\left\{\begin{array}{c}n+1,...,\\ n+m_1\end{array}\right\} & & & & D^{n+m_1+m_2}\left\{\begin{array}{c}n+m_1+1,...\\ n+m_1+m_2\end{array}\right. \\ & \nwarrow & & \nearrow & \\ & & D^n & & \end{array} \tag{9}$$

with the four arrows being the canonical injections is a quasi-colimit diagram.

Corollary 14 *Let M be a microlinear space. Given $\gamma_1, \gamma_2 : D^{n+m_1+m_2} \to M$,*

$$\begin{aligned}&\gamma_1 \mid D^{n+m_1+m_2}\{(n+i,n+m_1+j) \mid 1\leq i\leq m_1, 1\leq j\leq m_2\}\\ &\quad = \gamma_2 \mid D^{n+m_1+m_2}\{(n+i,n+m_1+j) \mid 1\leq i\leq m_1, 1\leq j\leq m_2\}\end{aligned}$$

obtains iff both

$$\gamma_1 \mid D^{n+m_1+m_2}\{n+1,...,n+m_1\} = \gamma_2 \mid D^{n+m_1+m_2}\{n+1,...,n+m_1\}$$

and

$$\gamma_1 \mid D^{n+m_1+m_2}\{n+m_1+1,...,n+m_1+m_2\} = \gamma_2 \mid D^{n+m_1+m_2}\{n+m_1+1,...,n+m_1+m_2\}$$

obtain.

Proposition 15 *Let M be a microlinear space. Then we have the following two statements:*

1. *Given*

$$\gamma_1 : D^4 \to M, \gamma_2 : D^4 \to M, \gamma_3 : D^4 \to M, \gamma_4 : D^4 \to M$$

if it holds that

$$\begin{aligned}&\gamma_1 \mid D^4\{(3,4)\} = \gamma_2 \mid D^4\{(3,4)\}\\ &\gamma_3 \mid D^4\{(3,4)\} = \gamma_4 \mid D^4\{(3,4)\}\\ &\gamma_1 \mid D^4\{(2,3),(2,4)\} = \gamma_3 \mid D^4\{(2,3),(2,4)\} \qquad (10)\\ &\gamma_2 \mid D^4\{(2,3),(2,4)\} = \gamma_4 \mid D^4\{(2,3),(2,4)\} \qquad (11)\end{aligned}$$

then all of

$$\begin{aligned}&\gamma_1 \underset{12}{\dot{-}} \gamma_2\\ &\gamma_3 \underset{12}{\dot{-}} \gamma_4\\ &\left(\gamma_1 \underset{12}{\dot{-}} \gamma_2\right) \underset{1}{\dot{-}} \left(\gamma_3 \underset{12}{\dot{-}} \gamma_4\right)\end{aligned}$$

are well defined.

2. *Given*

$$\gamma_1 : D^4 \to M, \gamma_2 : D^4 \to M, \gamma_3 : D^4 \to M, \gamma_4 : D^4 \to M,$$
$$\gamma_5 : D^4 \to M, \gamma_6 : D^4 \to M, \gamma_7 : D^4 \to M, \gamma_8 : D^4 \to M$$

if it holds that

$$\gamma_1 \mid D^4\{(3,4)\} = \gamma_2 \mid D^4\{(3,4)\}$$
$$\gamma_3 \mid D^4\{(3,4)\} = \gamma_4 \mid D^4\{(3,4)\}$$
$$\gamma_5 \mid D^4\{(3,4)\} = \gamma_6 \mid D^4\{(3,4)\}$$
$$\gamma_7 \mid D^4\{(3,4)\} = \gamma_8 \mid D^4\{(3,4)\}$$
$$\gamma_1 \mid D^4\{(2,3),(2,4)\} = \gamma_3 \mid D^4\{(2,3),(2,4)\}$$
$$\gamma_2 \mid D^4\{(2,3),(2,4)\} = \gamma_4 \mid D^4\{(2,3),(2,4)\}$$
$$\gamma_5 \mid D^4\{(2,3),(2,4)\} = \gamma_7 \mid D^4\{(2,3),(2,4)\}$$
$$\gamma_6 \mid D^4\{(2,3),(2,4)\} = \gamma_8 \mid D^4\{(2,3),(2,4)\}$$
$$\gamma_1 \mid D^4\{(1,2),(1,3),(1,4)\} = \gamma_5 \mid D^4\{(1,2),(1,3),(1,4)\} \tag{12}$$
$$\gamma_2 \mid D^4\{(1,2),(1,3),(1,4)\} = \gamma_6 \mid D^4\{(1,2),(1,3),(1,4)\} \tag{13}$$
$$\gamma_3 \mid D^4\{(1,2),(1,3),(1,4)\} = \gamma_7 \mid D^4\{(1,2),(1,3),(1,4)\} \tag{14}$$
$$\gamma_4 \mid D^4\{(1,2),(1,3),(1,4)\} = \gamma_8 \mid D^4\{(1,2),(1,3),(1,4)\} \tag{15}$$

then all of

$$\gamma_1 \underset{12}{\dot{-}} \gamma_2$$
$$\gamma_3 \underset{12}{\dot{-}} \gamma_4$$
$$\gamma_5 \underset{12}{\dot{-}} \gamma_6$$
$$\gamma_7 \underset{12}{\dot{-}} \gamma_8$$
$$\left(\gamma_1 \underset{12}{\dot{-}} \gamma_2\right) \underset{1}{\dot{-}} \left(\gamma_3 \underset{12}{\dot{-}} \gamma_4\right)$$
$$\left(\gamma_5 \underset{12}{\dot{-}} \gamma_6\right) \underset{1}{\dot{-}} \left(\gamma_7 \underset{12}{\dot{-}} \gamma_8\right)$$
$$\left(\left(\gamma_1 \underset{12}{\dot{-}} \gamma_2\right) \underset{1}{\dot{-}} \left(\gamma_3 \underset{12}{\dot{-}} \gamma_4\right)\right) \dot{-} \left(\left(\gamma_5 \underset{12}{\dot{-}} \gamma_6\right) \underset{1}{\dot{-}} \left(\gamma_7 \underset{12}{\dot{-}} \gamma_8\right)\right)$$

are well defined.

Proof. We deal with the above two statements in order.

1. For the first statement, we have to show that

$$\left(\gamma_1 \underset{12}{\dot{-}} \gamma_2\right) \mid D^3\{(2,3)\} = \left(\gamma_3 \underset{12}{\dot{-}} \gamma_4\right) \mid D^3\{(2,3)\}$$

which is, by dint of Corollary 14, tantamout to showing that

$$\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \mid D^3\{2\} = \left(\gamma_3 \underset{12}{\cdot} \gamma_4\right) \mid D^3\{2\} \tag{16}$$

$$\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \mid D^3\{3\} = \left(\gamma_3 \underset{12}{\cdot} \gamma_4\right) \mid D^3\{3\} \tag{17}$$

because of the quasi-colimit diagram

$$\begin{array}{ccccc} & & D^3\{(2,3)\} & & \\ & \nearrow & & \nwarrow & \\ D^3\{2\} & & & & D^3\{3\} \\ & \nwarrow & & \nearrow & \\ & & D^3\{2,3\} & & \end{array}$$

with the four arrows being the canonical injections (Lemma 13 with $n = m_1 = m_2 = 1$). Due to the quasi-colimit diagram

$$\begin{array}{ccccc} & & D^4\{(2,3),(2,4)\} & & \\ & \nearrow & & \nwarrow & \\ D^4\{2\} & & & & D^4\{3,4\} \\ & \nwarrow & & \nearrow & \\ & & D^4\{2,3,4\} & & \end{array}$$

with the four arrows being the canonical injections (Lemma 13 with $n = m_1 = 1$ and $m_2 = 2$), the condition (10) is equivalent to the conditions

$$\gamma_1 \mid D^4\{2\} = \gamma_3 \mid D^4\{2\} \tag{18}$$

$$\gamma_1 \mid D^4\{3,4\} = \gamma_3 \mid D^4\{3,4\} \tag{19}$$

while the condition (11) is equivalent to the conditions

$$\gamma_2 \mid D^4\{2\} = \gamma_4 \mid D^4\{2\} \tag{20}$$

$$\gamma_2 \mid D^4\{3,4\} = \gamma_4 \mid D^4\{3,4\} \tag{21}$$

In order to show that (16) obtains, we note that the quasi-colimit diagram in (7) with $n = 2$ is to be restricted to the quasi-colimit diagram

$$\begin{array}{ccccc} & & D^5\{2,(3,5),(4,5)\} & & \\ & \nearrow & & \nwarrow & \\ D^4\{2\} & & & & D^4\{2\} \\ & \nwarrow & & \nearrow & \\ & & D^4\{2,(3,4)\} & & \end{array}$$

so that the conditions (18) and (20) imply (16). It is easy to see that

$$\left(\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \mid D^3\{3\}\right) \circ i_2^3 = \left(\gamma_1 \mid D^4\{3,4\}\right) \circ i_2^4 = \left(\gamma_2 \mid D^4\{3,4\}\right) \circ i_2^4$$

$$\left(\left(\gamma_3 \underset{12}{\cdot} \gamma_4\right) \mid D^3\{3\}\right) \circ i_2^3 = \left(\gamma_3 \mid D^4\{3,4\}\right) \circ i_2^4 = \left(\gamma_4 \mid D^4\{3,4\}\right) \circ i_2^4$$

obtain with

$$i_2^3 : (d_1, d_2) \in D^2 \mapsto (d_1, d_2, 0) \in D^3$$
$$i_2^4 : (d_1, d_2) \in D^2 \mapsto (d_1, d_2, 0, 0) \in D^4$$

so that (19) and (21) imply (17).

2. For the second statement, we have to show that

$$\left(\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \underset{1}{\cdot} \left(\gamma_3 \underset{12}{\cdot} \gamma_4\right)\right) \mid D^2\{(1,2)\} = \left(\left(\gamma_5 \underset{12}{\cdot} \gamma_6\right) \underset{1}{\cdot} \left(\gamma_7 \underset{12}{\cdot} \gamma_8\right)\right) \mid D^2\{(1,2)\}$$

which is tantamout to showing that

$$\left(\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \underset{1}{\cdot} \left(\gamma_3 \underset{12}{\cdot} \gamma_4\right)\right) \mid D^2\{1\} = \left(\left(\gamma_5 \underset{12}{\cdot} \gamma_6\right) \underset{1}{\cdot} \left(\gamma_7 \underset{12}{\cdot} \gamma_8\right)\right) \mid D^2\{1\} \tag{22}$$

$$\left(\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \underset{1}{\cdot} \left(\gamma_3 \underset{12}{\cdot} \gamma_4\right)\right) \mid D^2\{2\} = \left(\left(\gamma_5 \underset{12}{\cdot} \gamma_6\right) \underset{1}{\cdot} \left(\gamma_7 \underset{12}{\cdot} \gamma_8\right)\right) \mid D^2\{2\} \tag{23}$$

because of the quasi-colimit diagram

$$\begin{array}{ccccc} & & D^2\{(1,2)\} & & \\ & \nearrow & & \nwarrow & \\ D^2\{1\} & & & & D^2\{2\} \\ & \nwarrow & & \nearrow & \\ & & D^2\{1,2\} & & \end{array}$$

with the four arrows being the canonical injections (Lemma 11). Due to the quasi-colimit diagram

$$\begin{array}{ccccc} & & D^4\{(1,2),(1,3),(1,4)\} & & \\ & \nearrow & & \nwarrow & \\ D^4\{1\} & & & & D^4\{2,3,4\} \\ & \nwarrow & & \nearrow & \\ & & D^4\{1,2,3,4\} & & \end{array}$$

with the four arrows being the canonical injections (Lemma 13 with $n = 0$, $m_1 = 1$ and $m_2 = 3$), we have

- the condition (12) is equivalent to the conditions

$$\gamma_1 \mid D^4\{1\} = \gamma_5 \mid D^4\{1\} \tag{24}$$
$$\gamma_1 \mid D^4\{2,3,4\} = \gamma_5 \mid D^4\{2,3,4\} \tag{25}$$

- the condition (13) is equivalent to the conditions

$$\gamma_2 \mid D^4\{1\} = \gamma_6 \mid D^4\{1\} \tag{26}$$
$$\gamma_2 \mid D^4\{2,3,4\} = \gamma_6 \mid D^4\{2,3,4\} \tag{27}$$

- the condition (14) is equivalent to the conditions

$$\gamma_3 \mid D^4\{1\} = \gamma_7 \mid D^4\{1\} \tag{28}$$
$$\gamma_3 \mid D^4\{2,3,4\} = \gamma_7 \mid D^4\{2,3,4\} \tag{29}$$

- the condition (15) is equivalent to the conditions

$$\gamma_4 \mid D^4\{1\} = \gamma_8 \mid D^4\{1\} \tag{30}$$
$$\gamma_4 \mid D^4\{2,3,4\} = \gamma_8 \mid D^4\{2,3,4\} \tag{31}$$

In order to show that (22) obtains, we note first that the quasi-colimit diagram in 7 with $n = 2$ is to be restricted to the quasi-colimit diagram

$$\begin{array}{ccccc} & & D^5\{1,(3,5),(4,5)\} & & \\ & \nearrow & & \nwarrow & \\ D^4\{1\} & & & & D^4\{1\} \\ & \nwarrow & & \nearrow & \\ & & D^4\{1,(3,4)\} & & \end{array}$$

so that we have

- the conditions (24) and (26) imply

$$\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \mid D^3\{1\} = \left(\gamma_5 \underset{12}{\cdot} \gamma_6\right) \mid D^3\{1\} \tag{32}$$

- the conditions (28) and (30) imply

$$\left(\gamma_3 \underset{12}{\cdot} \gamma_4\right) \mid D^3\{1\} = \left(\gamma_7 \underset{12}{\cdot} \gamma_8\right) \mid D^3\{1\} \tag{33}$$

We note also that the quasi-colimit diagram in (7) with $n = 1$ is to be restricted to the quasi-colimit diagram

$$\begin{array}{ccccc} & & D^4\{1,(2,4),(3,4)\} & & \\ & \nearrow & & \nwarrow & \\ D^3\{1\} & & & & D^3\{1\} \\ & \nwarrow & & \nearrow & \\ & & D^3\{1,(2,3)\} & & \end{array}$$

so that the conditions (32) and (**??**) imply the condition (22). It is easy to see that

$$\begin{aligned} &\left(\left(\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \underset{1}{\cdot} \left(\gamma_3 \underset{12}{\cdot} \gamma_4\right)\right) \mid D^2\{2\}\right) \circ i^2 \\ &= \left(\left(\gamma_1 \underset{12}{\cdot} \gamma_2\right) \mid D^3\{2,3\}\right) \circ i^3 = \left(\left(\gamma_3 \underset{12}{\cdot} \gamma_4\right) \mid D^3\{2,3\}\right) \circ i^3 \\ &= \left(\gamma_1 \mid D^4\{2,3,4\}\right) \circ i^4 = \left(\gamma_2 \mid D^4\{2,3,4\}\right) \circ i^4 \\ &= \left(\gamma_3 \mid D^4\{2,3,4\}\right) \circ i^4 = \left(\gamma_4 \mid D^4\{2,3,4\}\right) \circ i^4 \end{aligned}$$

and

$$\begin{aligned}
&\left(\left(\left(\gamma_5 \underset{12}{\cdot} \gamma_6\right) \underset{1}{\cdot} \left(\gamma_7 \underset{12}{\cdot} \gamma_8\right)\right) \mid D^2\{2\}\right) \circ i^2 \\
&= \left(\left(\gamma_5 \underset{12}{\cdot} \gamma_6\right) \mid D^3\{2,3\}\right) \circ i^3 = \left(\left(\gamma_7 \underset{12}{\cdot} \gamma_8\right) \mid D^3\{2,3\}\right) \circ i^3 \\
&= \left(\gamma_5 \mid D^4\{2,3,4\}\right) \circ i^4 = \left(\gamma_6 \mid D^4\{2,3,4\}\right) \circ i^4 \\
&= \left(\gamma_7 \mid D^4\{2,3,4\}\right) \circ i^4 = \left(\gamma_8 \mid D^4\{2,3,4\}\right) \circ i^4
\end{aligned}$$

obtain with

$$\begin{aligned}
&i^2 : d \in D \mapsto (d,0) \in D^2\{2\} \\
&i^3 : d \in D \mapsto (d,0,0) \in D^3\{2,3\} \\
&i^4 : d \in D \mapsto (d,0,0,0) \in D^4\{2,3,4\}
\end{aligned}$$

so that (25), (27), (29) and (31) imply (23).

■

Notation 16 *Let M be a microlinear space.*

1. *We denote by $\mathfrak{X}(M)$ the totality of vector fields on M. It forms a Lie algebra. We take the third viewpoint of a vector field in the essentially equivalent three discussed in §3.2 of [4]. Namely, a vector field X on M is a mapping $d \in D \mapsto X_d \in M^M$ with $X_0 = \mathrm{id}_M$.*

2. *Given $X, ..., X_n \in \mathfrak{X}(M)$, we denote by $X_n * ... * X_1$ the mapping $(d_1, ..., d_n) \in D^n \mapsto (X_n)_{d_n} \circ ... \circ (X_1)_{d_1} \in M^M$.*

3. *We recall (cf. Proposition 8 in §3.4 of [4]) that*

$$[X_1, X_2] = X_2 * X_1 \underset{\cdot}{-} (X_1 * X_2)^{\sigma_{21}}$$

with

$$\sigma_{21} = \begin{pmatrix} 12 \\ 21 \end{pmatrix}$$

We recall (cf. Prposition 2.7 of [6]) that

$$\begin{aligned}
&[X_1, [X_2, X_3]] \\
&= \left(X_3 * X_2 * X_1 \underset{1}{\cdot} (X_2 * X_3 * X_1)^{\sigma_{132}}\right) \underset{\cdot}{-} \left((X_1 * X_3 * X_2)^{\sigma_{231}} \underset{1}{\cdot} (X_1 * X_2 * X_3)^{\sigma_{321}}\right)
\end{aligned}$$

with

$$\sigma_{132} = \begin{pmatrix} 123 \\ 132 \end{pmatrix}, \sigma_{231} = \begin{pmatrix} 123 \\ 312 \end{pmatrix}, \sigma_{321} = \begin{pmatrix} 123 \\ 321 \end{pmatrix}$$

We note that

$$
\begin{aligned}
&[X_1,[X_2,[X_3,X_4]]]\\
&=\begin{pmatrix} \left(X_4*X_3*X_2*X_1 \underset{12}{\cdot} (X_3*X_4*X_2*X_1)^{\sigma_{1243}}\right) \underset{1}{\cdot} \\ \left((X_2*X_4*X_3*X_1)^{\sigma_{1342}} \underset{12}{\cdot} (X_2*X_3*X_4*X_1)^{\sigma_{1432}}\right) \end{pmatrix} \underset{-}{\cdot}\\
&\begin{pmatrix} \left((X_1*X_4*X_3*X_2)^{\sigma_{2341}} \underset{12}{\cdot} (X_1*X_3*X_4*X_2)^{\sigma_{2431}}\right) \underset{1}{\cdot} \\ \left((X_1*X_2*X_4*X_3)^{\sigma_{3421}} \underset{12}{\cdot} (X_1*X_2*X_3*X_4)^{\sigma_{4321}}\right) \end{pmatrix}
\end{aligned}
$$

with

$$
\sigma_{1243}=\begin{pmatrix}1234\\1243\end{pmatrix},\sigma_{1342}=\begin{pmatrix}1234\\1423\end{pmatrix},\sigma_{1432}=\begin{pmatrix}1234\\1432\end{pmatrix},\sigma_{2341}=\begin{pmatrix}1234\\4123\end{pmatrix},
$$
$$
\sigma_{2431}=\begin{pmatrix}1234\\4132\end{pmatrix},\sigma_{3421}=\begin{pmatrix}1234\\4312\end{pmatrix},\sigma_{4321}=\begin{pmatrix}1234\\4321\end{pmatrix}
$$

&\left(\left(\left(\gamma_{4213} \underset{42}{\cdot} \gamma_{4231}\right) \underset{1}{\cdot} \left(\gamma_{4132} \underset{42}{\cdot} \gamma_{4312}\right)\right) \underset{\cdot}{-} \left(\left(\gamma_{2134} \underset{42}{\cdot} \gamma_{2314}\right) \underset{1}{\cdot} \left(\gamma_{1324} \underset{42}{\cdot} \gamma_{3124}\right)\right)\right) + \\
&\left(\left(\gamma_{4321} \underset{43}{\cdot} \gamma_{4312}\right) \underset{1}{\cdot} \left(\gamma_{4213} \underset{43}{\cdot} \gamma_{4123}\right)\right) \underset{\cdot}{-} \left(\left(\gamma_{3214} \underset{43}{\cdot} \gamma_{3124}\right) \underset{1}{\cdot} \left(\gamma_{2134} \underset{43}{\cdot} \gamma_{1234}\right)\right) \\
&= 0 \qquad (36)
\end{aligned}$$

Proof. The proof is divided into thirteen steps.

1. Since

$$\begin{aligned}
&\gamma_{1234}\left(d_1, d_2, d_3, d_4\right) \\
&= \mathfrak{m}\left(d_1, d_2, d_3, d_4, \underset{5}{0}, ..., \underset{53}{0}\right)
\end{aligned}$$

and

$$\begin{aligned}
&\gamma_{1243}\left(d_1, d_2, d_3, d_4\right) \\
&= \mathfrak{m}\left(\begin{array}{c} d_1, d_2, d_3, d_4, \underset{5}{0}, ..., \underset{9}{0}, d_3d_4, \underset{11}{0}, ..., \underset{20}{0}, d_1d_3d_4, \underset{22}{0}, ..., \underset{25}{0}, d_2d_3d_4, \underset{27}{0}, ..., \underset{30}{0}, \\ d_1d_2d_3d_4, \underset{32}{0}, ..., \underset{53}{0} \end{array}\right)
\end{aligned}$$

we have

$$\left(\gamma_{1234} \underset{12}{\cdot} \gamma_{1243}\right)(d_1,d_2,d_3)$$
$$= \mathfrak{m}\left(d_1,d_2,\underset{3}{0},...,\underset{9}{0},\underset{10}{-d_3},\underset{11}{0},...,\underset{20}{0},-d_1d_3,\underset{22}{0},...,\underset{25}{0},-d_2d_3,\underset{27}{0},...,\underset{30}{0},-d_1d_2d_3,\underset{32}{0},...,\underset{53}{0}\right) \tag{37}$$

For we have

$$\mathfrak{n}^4_{(\gamma_{1234},\gamma_{1243})}(d_1,d_2,d_3,d_4,d_5)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1,d_2,d_3,d_4,\underset{5}{0},...,\underset{9}{0},\underset{10}{d_3d_4-d_5},\underset{11}{0},...,\underset{20}{0},d_1d_3d_4-d_1d_5,\underset{22}{0},...,\underset{25}{0}, \\ d_2d_3d_4-d_2d_5,\underset{27}{0},...,\underset{30}{0},d_1d_2d_3d_4-d_1d_2d_5,\underset{32}{0},...,\underset{53}{0} \end{array}\right)$$

Since

$$\gamma_{1342}(d_1,d_2,d_3,d_4)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1,d_2,d_3,d_4,\underset{5}{0},...,\underset{7}{0},d_2d_3,d_2d_4,\underset{10}{0},d_1d_2d_3,\underset{12}{0},...,\underset{15}{0},d_1d_2d_4,\underset{17}{0},...,\underset{27}{0}, \\ d_2d_3d_4,0,0,0,0,d_1d_2d_3d_4,\underset{34}{0},...,\underset{53}{0} \end{array}\right)$$

and

$$\gamma_{1432}(d_1,d_2,d_3,d_4)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1,d_2,d_3,d_4,\underset{5}{0},...,\underset{7}{0},d_2d_3,d_2d_4,d_3d_4,d_1d_2d_3,\underset{12}{0},...,\underset{15}{0},d_1d_2d_4,\underset{17}{0},...,\underset{20}{0}, \\ d_1d_3d_4,\underset{22}{0},...,\underset{29}{0},d_2d_3d_4,\underset{31}{0},...,\underset{34}{0},d_1d_2d_3d_4,\underset{36}{0},...,\underset{53}{0} \end{array}\right)$$

we have

$$\left(\gamma_{1342} \underset{12}{\cdot} \gamma_{1432}\right)(d_1,d_2,d_3)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1,d_2,\underset{3}{0},...,\underset{9}{0},\underset{11}{-d_3},\underset{20}{0},...,\underset{22}{0},-d_1d_3,\underset{27}{0},...,\underset{29}{0},d_2d_3,\underset{31}{0},-d_2d_3,\underset{32}{0},\underset{34}{0},d_1d_2d_3, \\ -d_1d_2d_3,\underset{36}{0},...,\underset{53}{0} \end{array}\right) \tag{38}$$

For we have

$$\mathfrak{n}^4_{(\gamma_{1342},\gamma_{1432})}(d_1,d_2,d_3,d_4,d_5)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1,d_2,d_3,d_4,\underset{5}{0},...,\underset{9}{0},\underset{10}{d_3d_4-d_5},\underset{11}{0},...,\underset{20}{0},d_1d_3d_4-d_1d_5,\underset{22}{0},...,\underset{27}{0}, \\ d_2d_5,\underset{29}{0},d_2d_3d_4-d_2d_5,\underset{31}{0},\underset{32}{0},d_1d_2d_5,\underset{34}{0},d_1d_2d_3d_4-d_1d_2d_5,\underset{36}{0},...,\underset{53}{0} \end{array}\right)$$

For the sake of the completeness of our proof, we have provided the reason why (37) and (38) are derivable, but we will omit such reasoning from now

on. (37) and (38) imply that

$$\left(\left(\gamma_{1234} \underset{12}{\cdot} \gamma_{1243}\right) \underset{1}{\cdot} \left(\gamma_{1342} \underset{12}{\cdot} \gamma_{1432}\right)\right)(d_1, d_2)$$
$$= \mathfrak{m}\left(d_1, \underset{2}{0}, ..., \underset{25}{0}, -d_2, \underset{27}{0}, -d_2, \underset{29}{0}, d_2, -d_1d_2, \underset{32}{0}, -d_1d_2, \underset{34}{0}, d_1d_2, \underset{36}{0}, ..., \underset{53}{0}\right) \tag{39}$$

Since

$$\gamma_{2341}(d_1, d_2, d_3, d_4)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1, d_2, d_3, d_4, d_1d_2, d_1d_3, d_1d_4, \underset{8}{0}, ..., \underset{12}{0}, d_1d_2d_3, \underset{14}{0}, ..., \underset{17}{0}, d_1d_2d_4, \underset{19}{0}, ..., \underset{22}{0}, \\ d_1d_3d_4, \underset{24}{0}, ..., \underset{38}{0}, d_1d_2d_3d_4, \underset{40}{0}, ..., \underset{53}{0} \end{array}\right)$$

and

$$\gamma_{2431}(d_1, d_2, d_3, d_4)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1, d_2, d_3, d_4, d_1d_2, d_1d_3, d_1d_4, \underset{8}{0}, \underset{9}{0}, d_3d_4, \underset{11}{0}, \underset{12}{0}, d_1d_2d_3, \underset{14}{0}, ..., \underset{17}{0}, d_1d_2d_4, \\ \underset{19}{0}, ..., \underset{24}{0}, d_1d_3d_4, d_2d_3d_4, \underset{27}{0}, ..., \underset{40}{0}, d_1d_2d_3d_4, \underset{42}{0}, ..., \underset{53}{0} \end{array}\right)$$

we have

$$\left(\gamma_{2341} \underset{12}{\cdot} \gamma_{2431}\right)(d_1, d_2, d_3)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1, d_2, \underset{3}{0}, ..., \underset{9}{0}, -d_3, \underset{11}{0}, ..., \underset{22}{0}, d_1d_3, 0, -d_1d_3, -d_2d_3, \\ \underset{27}{0}, ..., \underset{38}{0}, d_1d_2d_3, 0, -d_1d_2d_3, \underset{42}{0}, ..., \underset{53}{0} \end{array}\right) \tag{40}$$

Since

$$\gamma_{3421}(d_1, d_2, d_3, d_4)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1, d_2, d_3, d_4, d_1d_2, d_1d_3, d_1d_4, d_2d_3, d_2d_4, \underset{10}{0}, ..., \underset{14}{0}, d_1d_2d_3, \underset{16}{0}, ..., \underset{19}{0}, d_1d_2d_4, \\ \underset{21}{0}, \underset{22}{0}, d_1d_3d_4, \underset{24}{0}, ..., \underset{27}{0}, d_2d_3d_4, \underset{29}{0}, ..., \underset{46}{0}, d_1d_2d_3d_4, \underset{48}{0}, ..., \underset{53}{0} \end{array}\right)$$

and

$$\gamma_{4321}(d_1, d_2, d_3, d_4)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1, d_2, d_3, d_4, d_1d_2, d_1d_3, d_1d_4, d_2d_3, d_2d_4, d_3d_4, \underset{11}{0}, ..., \underset{14}{0}, d_1d_2d_3, \underset{16}{0}, ..., \underset{19}{0}, \\ d_1d_2d_4, \underset{21}{0}, ..., \underset{24}{0}, d_1d_3d_4, \underset{26}{0}, ..., \underset{29}{0}, d_2d_3d_4, \underset{31}{0}, ..., \underset{52}{0}, d_1d_2d_3d_4 \end{array}\right)$$

we have

$$\left(\gamma_{3421} \underset{12}{\cdot} \gamma_{4321}\right)(d_1, d_2, d_3)$$
$$= \mathfrak{m}\left(\begin{array}{c} d_1, d_2, \underset{3}{0}, ..., \underset{9}{0}, -d_3, \underset{11}{0}, ..., \underset{22}{0}, d_1d_3, \underset{24}{0}, -d_1d_3, \underset{26}{0}, \underset{27}{0}, d_2d_3, \underset{29}{0}, -d_2d_3, \\ \underset{31}{0}, ..., \underset{46}{0}, d_1d_2d_3, \underset{48}{0}, ..., \underset{52}{0}, -d_1d_2d_3 \end{array}\right) \tag{41}$$

(40) and (41) imply that

$$\begin{aligned}&\left(\left(\gamma_{2341}\underset{12}{\cdot}\gamma_{2431}\right)\underset{1}{\cdot}\left(\gamma_{3421}\underset{12}{\cdot}\gamma_{4321}\right)\right)(d_1,d_2)\\&=\mathfrak{m}\begin{pmatrix}d_1,\underset{2}{0},...,\underset{25}{0},-d_2,\underset{27}{0},-d_2,\underset{29}{0},d_2,\underset{31}{0},...,\underset{38}{0},d_1d_2,\underset{40}{0},\\-d_1d_2,\underset{42}{0},...,\underset{46}{0},-d_1d_2,\underset{48}{0},...,\underset{52}{0},d_1d_2\end{pmatrix}\end{aligned}\tag{42}$$
